

FREQUENTLY ASKED QUESTIONS:

Q. How does ReKRETE™ actually work?

A. ReKRETE™ is a fine, dry, grey powder that contains natural enzymes. The powder is small enough to enter the pores of the concrete. Upon contacting hydrocarbons (oil, grease, fuel, hydraulic fluid etc) the ReKRETE™ starts breaking down the molecules and removing the stains. ReKRETE™ is not an absorption product, it is a cleaner.

Q. Can people walk or drive over ReKRETE™ while it is being applied?

A. Yes. It is safe to walk or drive on ReKRETE™ while it is being applied. The benefit is that areas being treated (such as driveways and car parks) can remain open for business.

Q. Will ReKRETE™ damage paint lines, concrete, metal or plants?

A. No. ReKRETE™ is completely safe and environmentally friendly. It only works on hydrocarbons (oil, fuel etc).

Q. How long before I will see the results of using ReKRETE™?

A. ReKRETE™ starts work immediately. After applying ReKRETE™ you will see an immediate improvement to the concrete because of the coloured powder. The enzymes in ReKRETE™ take time to breakdown the complex hydrocarbon molecules, so it will be 24 hours before a significant improvement is seen.

For an obligation free demonstration, or more information on how your slippery, ugly, environmentally hazardous oil stained concrete can be cleaned with ReKRETE™ Waterless Concrete Cleaner contact:

THE PROBLEM

Oil and fuel are constantly being spilt onto your car parks and driveways. The stains are a slip hazard, they make your business look untidy and are an environmental disaster. From your concrete the oil "runs-off" and flows into creeks, rivers and bays where it harms all it touches.

The only solution for cleaning your concrete has been degreasers, which lift the oil and fuel, and pressure washing with very large quantities of "rinsing water". The contaminated wastewater is either illegally washed into storm water

drains, flowing into our creeks, rivers and bays or expensively captured, processed and sent to our overloaded sewage system.

There has been no safe, quick and economical solution to your slippery, ugly, environmentally hazardous oil stains, until now.

THE SOLUTION

ReKRETE™ Waterless Concrete Cleaner

ReKRETE™ is a fine dry powder that is delivered deep into the pores of your concrete. It contains natural enzymes which breakdown hydrocarbon molecules therefore removing the petroleum stains.

ReKRETE™ starts working immediately, but is a "time driven" process and significant improvement should be clearly visible within 24 hours.

ReKRETE™ is a revolutionary product, as it uses no water, does

not harm the environment, but it still cleans oil stains from your concrete.

ReKRETE™ not only makes your site safer, preserves its appearance and value, but more importantly, it protects the environment and its natural resources for future generations.

ReKRETE™ is non-corrosive and non-toxic to humans and animals. Plants, soils, paints, metals, concrete storm drains, sewer systems and underground water are not affected by ReKRETE™.
